Bilal Aljaddoua

Petroleum Engineer | Operational Systems Engineering | Digital Transformation of Oil Operations

Analysis, Design and Development of Digital Solutions for the Oil and Energy Sector

Location: Idlib, Maarrat al-Numan
Email: aljaddoua.bilal@gmail.com
Phone: 0936809092
Website: bilalaljaddoua.me

Professional Summary

Petroleum Engineer and Master's student in Computer Science, specializing in digital transformation, operational systems engineering, and software development for the oil and energy sector.

Currently working at the Syrian Petroleum Company (SPC) in Exploration and Production, focusing on production data management, volume reconciliation, operational analysis, and the development of software solutions to improve data reliability and operational efficiency. Previously worked in Oil Transportation, supporting tanker logistics and digital workflow improvements.

Experienced in translating complex operational requirements into integrated digital solutions through systems analysis, database architecture, application development, and API integration, with a focus on automation, operational oversight, and data-driven decision-making.

Professional Experience

Syrian Petroleum Company (SPC)

Operations Engineer | February 2026 - Present

- **Exploration and Production | 1 June 2026 - Present**

  Monitor and validate oil production data, analyze and reconcile volumes, and develop software solutions to improve data reliability and the effectiveness of operational oversight.

- **Oil Transportation | 1 February 2026 - 1 June 2026**

  Coordinate and monitor oil transportation by tanker trucks, and develop technical solutions to automate procedures and track and reconcile volumes between loading and receiving sites.

Education

Master's Degree in Computer Science - In Progress | Syrian Virtual University.

Bachelor's Degree in Petroleum Engineering | 2019-2024 | Homs University, Syria.

Areas of Expertise

- Digital transformation of oil and industrial operations.
- Analysis and design of operational and enterprise systems.
- Production and transportation data management and volume monitoring.
- Database engineering and systems integration.

Engineering and Technology Projects

SPC-TSOS | Digital Transformation System for Oil Transportation Management

Role: System Engineer and Developer | Status: Completed

Designed and developed an integrated digital platform to manage and track oil transportation by tanker trucks, consolidate operational data, and reconcile volumes between loading and receiving sites, improving information reliability and supporting operational oversight.

ControTik | Internet Network Management and Operations System

Role: Founder and Developer | Status: In Active Use

Developed an integrated operational system to manage internet service providers' services and subscriptions, integrating with MikroTik devices and automating billing, operational procedures, notifications and reporting.

Project website: controtik.com

Adoud | Operational Asset Management System

Role: System Analyst and Designer | Status: On Hold

Analyzed and designed an enterprise digital system to manage the lifecycle of assets and equipment, including tracking, lending and maintenance, alongside database design, operational procedures and audit mechanisms.

Graduation Project | AI-Assisted Engineering Decision Support

Field: Petroleum Reservoir Engineering and Deep Learning

Investigated the feasibility of developing a deep learning model to analyze well log data and estimate reservoir porosity, with the aim of applying artificial intelligence to support engineering evaluation and decision-making.

Technical Skills

Area	Technologies and Skills
Languages and Frameworks	C#, ASP.NET Core, EF Core, ADO.NET
APIs and Integration	REST APIs, MikroTik API
Authentication and Security	JWT Authentication
Databases	SQL Server, T-SQL, Stored Procedures
Systems Analysis and Design	System Analysis, Database Design, Requirements Analysis

Certifications and Professional Development

Petroleum Engineering and Industrial Safety

Industrial safety in oilfields.

Drilling fluids for oil wells.

Programming and Systems Engineering

Advanced programming courses.

Analysis and design of operational systems.

English Language

Advanced English language training - Linguaphone Institute, UK.

English proficiency certificate (B1) - British Cultural Centre.

Languages

Arabic: Native language.

English: B1 level, with the ability to work with technical terminology and reference materials.
